

COS30043 - Interface Design and Development Custom Web Application				
Criteria	Excellent	Satisfactory	Needs Improvement	Pts
<stage1> Project Setup and Structure 1. Create a new project using Vite or Vue CLI, and add Vue Router. 2. Create three simple single-file components: Home.vue, News.vue, and About.vue.	7 to >5.0 Pts Excellent Project fully set up, router works, all pages created properly.	5 to >3.0 Pts Satisfactory Project mostly set up, router present, minor issues.	3 to >0 Pts Needs Improvement Project setup incomplete, router missing, or major errors.	7 pts
<stage1> Home page, About page, and responsiveness 3. Home Page: o Include at least a title, a welcome paragraph, and two images. o In Stage 2, you can design the home page to serve the purpose of your intended web application 5. About Page: o Include a short paragraph about your web application. o Include two input fields for the user's first name and last name. Display a welcome message based on the user's name. o Show an image based on the user's selection from two radio buttons, such as "Mountain" or "Ocean".	6 to >4.0 Pts Excellent Fulfills all requirements for the two pages; layout is responsive across 3 devices.	4 to >2.0 Pts Satisfactory Pages mostly complete, minor issues regarding content or responsiveness.	2 to >0 Pts Needs Improvement Pages incomplete or little to no responsiveness.	6 pts
<stage1> News Page 4. News Page: o Display a list of news items read from a local JSON file. o Each news item should include at least four fields, such as date, title, short news content, and category. o Users must be able to search based on date, title, content, and category. o The news list must contain enough items to demonstrate pagination.	7 to >5.0 Pts Excellent Fully completed, includes loading JSON file, shows list with pagination, full search functionality.	5 to >3.0 Pts Satisfactory Data loads and displays, minor issues in functionality.	3 to >0 Pts Needs Improvement Data not properly loaded, search and pagination not functional or missing.	7 pts
<stage2> Technical Requirements • Utilise Vue.js components, router, and custom directives to build a modular and maintainable codebase. • Demonstrate proficient use of arrays for dynamic data handling. • Implement core Vue.js directives such as v-bind, v-model, v-if, v-for, and v-on to create interactive and reactive user interfaces. • Utilise a form with data validation. • Follow a mobile-first approach, ensuring your application is fully responsive across at least three device sizes. • Prioritise accessibility in input forms and tables to ensure usability for all users. • Apply coding conventions consistently, including proper case usage and indentation for readability and professionalism. • Utilise methods and computed properties in Vue.js. • Implement pagination for lists or data displays. • Incorporate data from external sources or APIs	10 to >7.0 Pts Excellent All technical specifications fully implemented.	7 to >3.0 Pts Satisfactory Most technical specifications met, but minor errors or issues are present.	3 to >0 Pts Needs Improvement Major technical issues or missing elements.	10 pts
<stage2> Functional Requirements • Implement features for user registration, login, and differentiated content visibility between authenticated and unauthenticated users. • Include functionality for all users to search for content and apply filters to refine results. • Integrate social features, such as liking or voting on content. • Allow authorised users to create, edit, and delete content. • Maintain persistent data storage, using a backend database, JSON files, or similar methods.	10 to >7.0 Pts Excellent All functional requirements fully met. The app demonstrates sufficient complexity for real-world use	7 to >3.0 Pts Satisfactory Basic functionality works, but some features are incomplete. Overall usable but needs refinement.	3 to >0 Pts Needs Improvement Basic functionality is missing or poorly implemented. The app is difficult to use.	10 pts
<stage2> Report and Code • The main functionality of your app. • A description of the technical components and tools you have used. • Highlights of any innovative features or unique approaches you have implemented. • A brief reflection on the challenges you encountered and how you addressed them.	5 to >3.0 Pts Excellent Clear, well-structured report that covers all the required elements.	3 to >1.0 Pts Satisfactory Report covers basic elements but lacks depth.	1 to >0 Pts Needs Improvement Report is poorly written or lacks critical information.	5 pts
<stage3> 1. Technique Complexity & Relevance The technique should not be a very basic one. It should be related to Vue.js,	6 to >4.0 Pts Excellent Technique is advanced, relevant, and significantly enhances the application. Demonstrates depth of research.	4 to >2.0 Pts Satisfactory Technique is moderately advanced and somewhat relevant.	2 to >0 Pts Needs Improvement Technique is basic or poorly integrated into the app. Little evidence of self learning.	6 pts
<stage3> 2. Implementation Quality and the feature you implement should significantly enhance your application	6 to >4.0 Pts Excellent Feature is well-implemented, fully functional.	4 to >2.0 Pts Satisfactory Feature is partially implemented with minor issues.	2 to >0 Pts Needs Improvement Feature is incomplete or non-functional.	6 pts
<stage3> 3. Video Content & Live Coding You may use PowerPoint to provide an introduction or summarise key points, but we are more interested in seeing how you actively engage with the development environment, demonstrate live coding by making real-time changes to your code, and clearly explain the technique with a solid understanding, rather than simply talking over a PowerPoint or Word document. This is also your opportunity to demonstrate your advanced skills. Your face must be visible throughout the video.	8 to >5.0 Pts Excellent Explanation covers main points but lacks depth or clarity. Live coding works but may have minor issues. (Note: transcribed exactly as shown in the original image)	5 to >2.0 Pts Satisfactory Feature is partially implemented with minor issues.	2 to >0 Pts Needs Improvement Explanation is unclear or disorganised. Live coding is incomplete or ineffective.	8 pts
